Why Invest in Connected Work?

• Improve safety compliance
• Digitize your entire workforce
• Capture human activity data
• Increase team collaboration
• Achieve operational efficiencies
• Gain transparency into operations

Why is Connected Work Important?

How connected work can quickly improve operational productivity, quality and safety for CPG manufacturing

What is Connected Work?

Connected work is a way to codify or systemize industrial work so interactions between humans and machines can be executed, measured and optimized. Combining “intelligent” machines with human activity data allows for a deeper layer of insights, informing next steps within a process, identifying patterns and even predicting future outcomes. With connected work, machines and digitally empowered humans work together to deliver rapid, measurable increases in productivity, quality and safety.

Why invest in Connected Work?

• Improve safety compliance
• Digitize your entire workforce
• Capture human activity data
• Increase team collaboration
• Achieve operational efficiencies
• Gain transparency into operations

How to Drive Continuous Improvement

Four Stages of Connected Work

1. Digitize
2. Execute
3. Measure
4. Transform

Tangible Results in Weeks

The Parsable Worker Platform delivers immediate value. Examples of customer results include:

- Decrease in start-up, shutdown, and changeover times: 4%
- Increase in OEE: 50%
- Reduction in non-productive time (NPT): 10x

Best-in-class manufacturing environments experience an 18x lower accident rate compared to average organizations.
